

OIL - HIGH OLEIC N4HE115 E *SU*

Next generation, ultra-early hybrid.

N4HE115 E *SU* matures around two weeks earlier than traditional hybrids providing growers with the option of an early harvest, late sowing or single crop. This high oleic hybrid is resistant to sulfonurea herbicides and has improved protection against sclerotinia.

KEY FEATURES

- Ultra-early maturity high oleic type.
- Excellent late season plant health.
- Best for late plant or as a double crop option.
- Under best agricultural practices, high oleic levels can reach up to 87%.
