

OIL - HIGH OLEIC N4H337 E

Early harvest provides flexibility to the grower.

N4H337 E is a sulfonlurea resistant, high oleic, early to mid-early maturity hybrid. Good fit for early harvest requiring zones. Excellent resistance to multiple races of downy mildew. Robust orobanche resistance to all known races helps producers to use orobanche infested fields.

Key features:

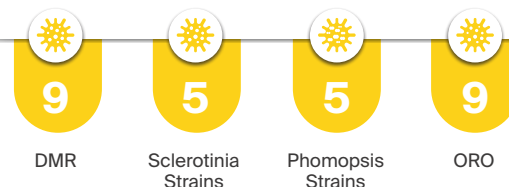

- Advanced genetic resistance to orobanche.
- Advanced resistance to the multiple races of downy mildew.
- Highly reliable and stress-free to grow.
- Advanced traits to support the grower.
