

CANOLA

NC155 TF

EARLY MATURING WITHOUT SACRIFICING YIELD

TruFlex[®]
CANOLA

Reminiscent of “Polish-type” hybrids of the past, NC155 TF provides growers with an extremely early maturing hybrid that doesn’t sacrifice yield. Flowering earlier and longer allows for exceptional pod set while maturing quickly to allow for quicker harvestability. Use NC155 TF in long season zones to avoid summer heat blast or in shorter season zones to spread out capital requirements and avoid the risks of frost.

MATURITY: Ultra-Early (Nuseed Group 1)

HEIGHT: Medium

SEED COLOR: Black

DISEASE PACKAGE

BLACKLEG: Multi-gene Resistant

FUSARIUM WILT: Resistant

KEY FEATURES

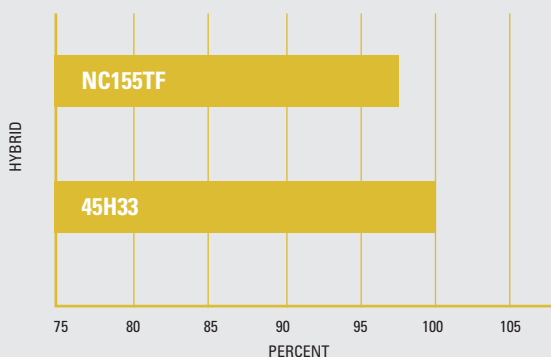

TruFlex[®] Canola with
Roundup Ready[®] Technology

Extremely early maturing

High yielding

Early flowering with great
longevity

YIELD % OF 45H33 - 14 LOCATIONS

YIELD RELATIVE TO 45H33 CHECK: 100%

“NC155 TF will be an excellent tool for growers. With early season vigour and consistently flowering before any other products and flowering longer than most hybrids the yield potential is tremendous. Having a very early maturing hybrid that can yield on par with long season hybrids will allow growers to maximize their yield and regardless of their length of growing season.”

SEED TREATMENT

NC155 TF is treated with Prosper EverGol to protect your seed investment against early season disease and insects.

TruFlex[®] CANOLA

IMPROVED CONTROL
OF TOUGH WEEDS

The flexibility of the TruFlex canola system will allow for the control of harder-to-kill weeds like Canada thistle and wild buckwheat.

FLEXIBILITY IN SPRAY RATES
AND TIMING

TruFlex canola will have a wider application window as compared to Roundup Ready[®] canola. If weather or a late flush of weeds delays your spray date, no problem – you will be able to spray up to first flower* when applying sequential rates of 22 fl oz/ac. The TruFlex canola system also enables flexibility with your Roundup PowerMAX[®] herbicide application rate to help get the job done.

HIGHER YIELD POTENTIAL
THROUGH GENETICS AND
CROP SAFETY

New genetics have packed a lot of yield potential into each TruFlex canola seed. New advances in trait technology will help enable better weed control and crop safety compared to Roundup Ready canola. It's a combination that could give you the opportunity to see much more yield potential at harvest time.

*First flower is when 50% of the plants in the field have no more than one flower.
